Food waste logging

A shift guide for sorting, weighing, and recording discarded food.

01 Waste categories

Prep scraps. Food discarded during preparation, such as vegetable peels.
Unsold food. Food prepared for sale that was never served and is discarded.
Customer leftovers. Food returned on a plate or tray after service.

02 How to log waste

Record the date, food item, waste category, and net weight in kilograms (kg). Use a separate entry for each food item and category. If your scale shows grams, divide by 1,000 before entering the weight.

Example entry. 7 November 2026 | Tomato trimmings | Prep scraps | 0.25 kg

03 Special cases

Donated food. Record donated items in the donation log. If you donate some of an unsold batch and discard the rest, enter only the discarded portion in the waste log.

Weighing with a container. Tare the empty container before adding food. If you already weighed both together, subtract the empty container weight. A filled bin weighing 2.4 kg with an empty weight of 0.6 kg contains 1.8 kg of food waste.
